

Health and Safety Statement

At Flora Patterns, the safety and quality of all materials used in our sewing patterns and craft kits are a priority. Every component is selected to ensure it is suitable for use in handmade items, including those intended for children. The following standards and certifications apply to the materials included in our kits:

- **Hollow-fibre toy filling** that complies with **BS5852** (British flammability standard), **BS1425** (British cleanliness standard), and **EN71-3** (European toy safety standard for chemical composition). This filling is also made from **recycled plastic**, supporting both safety and sustainability.
- **Embroidery thread** that is dyed to **Oeko-Tex® Standard 100**, ensuring the colours are tested and certified safe for use in children's toys. Further details about this certification can be found at www.oeko-tex.com.
- **Wool felt** that meets all relevant **EN71 European toy safety standards**, confirming it is safe for use in soft toys and craft projects.

All materials used in Flora Patterns kits are sourced from reputable suppliers and meet the required safety standards for craft and toy-making. **Certification documents can be provided on request** for customers, stockists, or event organisers who require formal evidence of compliance.
